

GENERAL DYNAMICS C4 SYSTEMS, INC. (GDC4S)

Protecting the United States' borders requires an ability to detect, track, identify, and classify activity in environments that are often isolated and rugged. General Dynamics has experience with nationwide deployment of integrated wireless communication systems. Specializing in command and control, communications networking, rugged computing, information assurance, cyber defense, and with advanced systems integration prowess, General Dynamics C4 Systems provides federal and civilian agencies with tools that make them more effective when performing the toughest jobs, in the most challenging environments, in the most unpredictable situations.

These projects include equipping the U.S. Coast Guard with an emergency rescue and command and control systems based on a network of deployed fixed radio towers. Called Rescue 21, the system covers more than 41,000 miles of coastline.

The company also developed and deployed an integrated wireless network at work in Washington, D.C. It is providing Justice Department field agents with interoperable communication.
