

Ball Aerospace & Technologies Corp. (BATC) is a recognized leader in air and space technology, advanced space system design and manufacturing, and professional analytic services for the military and civil space community and the intelligence community since 1957. BATC employs about 2000 scientists and engineers in 26 locations throughout the US.

Systems Engineering Solutions (SES) is BATC's fastest growing division, providing a wide range of air, space, and counterspace engineering with intelligence analysis services at 15 locations around the US. Ball Midwestern Operations (MWO) in Fairborn, Ohio, is the largest SES operating location. MWO, with its staff of 450 scientific, engineering, software, and intelligence analysis professionals, is located adjacent to WPAFB in Fairborn, Ohio, supporting tactical intelligence requirements from the National Air and Space Intelligence Center (NASIC). SES has operating locations in Colorado Springs, Colorado, which supports space operations at Shriver AFB, and near Goddard Space Flight Center, Md.
