

Ventera delivers innovative business and technology solutions that help our clients achieve meaningful results to their unique challenges. Ventera provides professional services that empower the success of many of the largest government agencies, telecommunications companies, and financial services firms in the world. Our business provides substantive value based on our deep understanding of our customers and their unique challenges and opportunities combined with our relentless commitment to customer success. Ventera and our exceptional professionals leverage their deep technical, functional and domain knowledge to apply technology as a means to achieve our most important end goal: Helping customers achieve meaningful results.

Ventera began operations in 1996 and since then has performed hundreds of structured software development projects. Nearly all of our work has been performed as a prime contractor and as such Ventera is adept at delivering valuable business results, in an ever-changing environment, accountable for results, within agreed upon time and budget constraints. Ventera provides a highly trained and experienced workforce that utilizes industry best practices including those from Project Management Institute, CMMI, Agile, Rational Unified Process, and ITIL to implement technology solutions. Our projects typically involve an Agile and/or iterative approach to software development that relies heavily on visualization, modeling, prototyping, and gathering user input at many stages of the project lifecycle.

Ventera's proven record of turning innovative concepts into real solutions for large enterprise customers makes us an ideal member of the Border Security Technology Consortium.
