Corporate Background

Pulsiam is a proven and innovative leader in public safety software headquartered in Los Angeles, California, with more than 30 years of experience in the industry. Specializing in public safety and disaster management, we have used our industry expertise to create a comprehensive browser-based command and control solution that is fully scalable and ideal for both the largest and the smallest agencies.

At Pulsiam, our focus is staying on the cutting edge of innovation through product development, integration, and by creating interfaces to the best mobile applications and software on the market. The public safety industry is full of new, ground-breaking ideas, and with Pulsiam's SafetyNet applications and extensive interfaces, you can choose exactly the right solution for your agency.

Pulsiam has installed the SafetyNet suite of public safety software at more than 90 locations worldwide, serving nearly one hundred million people. Pulsiam's flexible architecture allows our support team to make changes to customer systems and databases on the fly, without interrupting operations 90% of the time. Pulsiam's primary goal is to save lives: its fully integrated software and mobile application suite ensure that valuable, life-saving information is always in the hands of emergency responders as soon as it is available.

Pulsiam's current customers range from single agencies with a few users to international agencies with thousands of users. Pulsiam's suite of SafetyNet products, competitively superior due to their robust functionality, enable seamless data sharing across multiple jurisdictions and agencies.

Pulsiam excels at providing scalable, configurable products and integrating those products with third party solutions, allowing customers to retain their current software investments and integrate their public safety software into a single, integrated solution. With an extensive history of interface development (Pulsiam offers the widest variety of custom modules and interfaces in the industry), and a deep commitment to providing custom solutions in a one-size-fits all marketplace, Pulsiam will develop and configure any component that may be missing from an ideal solution.

Products

Pulsiam's **SafetyNet Suite** is a dynamic application suite built on a Rocket® UniVerse®, MultiValue database. SafetyNet Suite runs on UNIX and Linux operating systems. Pulsiam's primary product in the SafetyNet Suite is **SafetyNet CAD**, which is a computer aided command and control solution. It is an interactive, event-driven, incident management system designed for emergency communications centre personnel. SafetyNet CAD supports agencies that provide law enforcement services (including border patrol), fire suppression services, emergency medical services, and other municipal services, is easily modifiable, and is user-friendly. Additional, SafetyNet CAD can integrate with other CAD systems providing seamless sharing of critical real time information including video feeds.

SafetyNet CAD is extremely dynamic. With its many interfaces, SafetyNet CAD can communicate with diverse databases and applications, including Video Management Systems (VMS), providing a single command and control portal through which you can see and control all the resources at your disposal at any one time. With our recent drone to CAD integration, with manual or autonomous flight control, robust video surveillance options can also be fed into the command suite. Pulsiam's mobile applications, SafetyNet Mobile and SafetyNet Mobile Insight, use SafetyNet CAD's functionality and interfaces, providing officers in the field the same depth of information that dispatchers and call takers experience at their workstations.
