

DetectaChem Is an Original Equipment Manufacturer (OEM) of handheld explosive and drug detection systems. Our customers are primarily the U.S. Military and U.S. Law Enforcement Organizations. We pioneered automated colorimetric detection technology, and as a result are able to offer small, rugged, handheld detection systems at a low cost to the operational community.

The SEEKERe Explosive Detection System by DetectaChem is the world's smallest, most rugged, automated explosive detection system. The system is comprised of a dedicated handheld electronics package with a consumable sample swipe card. The MobileDetect detection system is an even more inexpensive option for drug and explosive detection and pairs a small swab pouch with a mobile phone-based application that can be run on any first responder or border patrolman's phone.

The SEEKERe handheld explosive system provides support for humanitarian, first responder, and military unit operations in urban and border checkpoint environments as a trace explosive residue detection system. Other explosive detection systems are either too large, bulky, insensitive, or fragile, meaning that if you are in the field the SEEKERe system is the ideal candidate for use to determine if an

unknown substance is a threat or not. The small size of the SEEKERe system means that the operator realizes a greater mobility and lowers their workload requirements. The system is no larger than a cell phone and after sampling off of a surface the system runs an automated detection algorithm, further reducing operator workload. Power requirements for this system are extremely low, and if used sparingly this system can stay in a dormant state for months at a time only to be woken back up with the push of a button and operational in 45 seconds.

The SEEKERe has been widely adopted by the US Department of Defense and is currently in use by US forces domestically as well as abroad. Specific US customers include the US Navy, US Army, US Airforce, ATF, local bomb squads, police departments, fire/hazmat teams, airports, sports venues, educational institutions, and prisons. DetectaChem products can be found in over 20 countries around the world including the US, Canada, Mexico, Israel, Afghanistan, and the UK.
