

Advanced Detection Technology is a leading manufacturer of Under Vehicle Inspection Systems (UVIS) designed to help governments, corporations and military installations around the world decrease threats of terrorism, drugs and weapons smuggling by increasing entry point security.

Our industry leading Ultra High Definition (UHD) image provides the operator with the best possible starting point for detecting contraband. This combined with built-in License Plate Recognition (LPR) along with Advanced Magnetic Field Detection and Change Detection.

Our product line includes “best-in-class” portable solutions for mobile checkpoints and rapid deployments. Our products require no ramp to increase the distance to the cameras, and they feature sunlight readable touch screen monitors. They are capable of operating through a vehicle inverter which makes it possible to deploy them in highly remote areas.

The in-ground solutions includes stitch image combined with real time video that enables the user to see critical areas and can include a 36” curved UHD monitor.

Advanced Detection Technology’s products can be delivered in most countries through highly qualified partners.
