

GLOBAL JUSTICE SOLUTIONS, LLC

Security Screening and Systems

Research and Development Capabilities

Global Justice Solutions, LLC (GJS) focuses its services on the integration and collaboration of multiple security technologies in developing unique solutions for each Client. GJS works closely with security research and technology firms to incorporate and improve security technology in the detection and interdiction of contraband. In partnership with leading technology developers, we have deployed over 300 screening systems and full-body scanners to multiple federal and international governmental entities. GJS continues to search for improved methods of varied technology detection systems for security enhancements and contraband detection. We believe scanning technologies, contraband detection, weapons detection, and personal identification systems have a direct application to border security. GJS remains interested in furthering the development of these technologies in the border protection field.
