Navmar Applied Sciences Corporation

Navmar is a DoD contractor performing research, development, engineering and installation of advanced electrical and mechanical systems for shipboard and aircraft platforms. In the area of shipboard platforms, Navmar develops custom antisubmarine warfare electronic listening systems used on sonobouys for the detection of submarine and unmanned underwater vehicle threats.

In the area of aircraft platforms, Navmar develops and operates Tier 1, 2 and 3 sized unmanned air vehicle systems. This includes the design and testing of composite airframes, flight control systems, command and control radio systems, satellite communication equipment and microwave radio data relay systems. The unmanned air vehicles are used for Information, Surveillance, and Reconnaissance (ISR) missions.
