

HHI (Harrison Holdings International, LLC) provides support to government and commercial clients in all areas of supply chain and logistics, trade and customs operations, border security, strategic advisory services, information technology, and informatics and analytics. Combined with our network of advisors and industry partners, HHI brings the right people with a Mission Focused perspective to enable the success of our customers. We have been chosen to be part of a unique organization that identifies emerging, newly developed and innovative technologies that may be applicable to our clients' mission needs. Some of the recent technologies (applicable to research and development in the border security technology field) we've brought to our clients:

- Advanced UAV applications
 - Advanced UAVs including 10 day loiter, silent operations, and payload support for mining/oil gas/agriculture/security/defense applications
 - Tethered (long loiter) or untethered drones for border or other security requirements (quiet, highly maneuverable, portable/mobile)
 - Manufacturing capability supporting new aircraft design and low-cost component build
- Advanced coatings for lightning strike abatement, EMI/RFI shielding, and potential stealth properties
- Single Propeller aircraft for multiple missions (High Performance, high performance Trainer, and ISR Patrol)
- Advanced glove and clothing materials improving the protection of law enforcement and special operations personnel
- Advanced anti-fog goggle technology for a wide variety of applications.
- Riverine, Littoral and Port networked sub-surface, surface, and aerial search and surveillance capability

Our broad range of capabilities includes:

Trade and Customs Operations: Our Trade & Customs Operations expertise spans a broad spectrum that includes improving the efficiency and security of trade, improving control of immigration and cross-border transit, and combating illicit trade activities.

Border Security Operations: Our support has helped clients improve efficiency and effectiveness of Border Security Operations: processes, systems and technology.

Strategic Advisory: Our Strategic Advisory services include commercial management strategy, business development and organizational strategy support. Our expertise also includes the evaluation of complex organizational designs and strategies that require improving complex internal, external, and sub-tier vendor structures.

Information Technology: HHI brings Information Technology expertise that delivers tailored application and software development, as well as cyber and network security support.

Supply Chain and Logistics: Our end-to-end supply chain and logistics expertise includes: solutions to global supply chain operations, advanced analytics, supply chain risk management, and sustainment of sophisticated equipment and system requirements.

Informatics and Analytics: We have sophisticated advanced analytics capabilities that transform complex, big data sets into information that helps support management decisions.

Cyber Security: We help clients assess employee and support cyber competencies with a unique capability, as well as a perspective formed through work developing world-class cyber competencies.
