

Tribalco is proud to bring a robust capability set to the Border Security Technology Consortium. We have an exceptional history of engineering, procuring, integrating, and maintaining enterprise IT solutions of varying sizes and complexities. We deliver unsurpassed technical expertise and innovative solutions in support of Command, Control, Communications, Computers, Intelligence, Surveillance and Reconnaissance (C4ISR). We excel in sustaining, monitoring, and managing advanced and secure voice, video, and data networks in all environments, including some of the world's most remote and austere locations. Additionally, Tribalco has designed, furnished, and installed secure VTC, Video Management Systems, and Computer Aided Dispatch to civilian and DoD entities.

Tribalco has a history of successful projects with Customs and Border Protection and other Department of Homeland Security Agencies. We have deployed communications infrastructure, outfitted vehicles with encrypted communications systems, and worked with partners to integrate and field a best in class surveillance solution for a critical DHS entity. Tribalco has also designed, engineered, and operated secure network operation centers for the Department of Defense in OCONUS locations. Our track record of delivering cutting edge solutions in mission critical environments directly relates to the goals of the BSTC.

Tribalco's extensive partner network allows us to bring best in class solutions to the BSTC. We provide the full spectrum of both physical and electronic security solutions, anti-drone systems, and interoperable wireless communications systems. As an NSA Trusted Integrator, we are a leader in the field of Commercial Solutions for Classified (CSfC), which allows classified traffic on COTS devices and networks, saving large amounts of time and money for end users. Tribalco's Soldier Survival Division has been the program of record for US Special Operations Command's Tactical Casualty Combat Care for over 5 years. This program is responsible for the kitting, training, and deployment of medical systems which get a wounded soldier off the battlefield and back to a hospital. We also run the Guardian Angel program which trains elite rescue units (PJ's, SEALs, etc.). The skills and lessons learned from these efforts will bring benefits and further enhance the capabilities of the BSTC.
