

STRAX Intelligence Group (SIG) develops the STRAX Platform, a common operating platform designed for real-time response. By unifying priority alerts, video, and communication tools into one map-based view, the STRAX Platform allows for improved collaboration across agencies and command structures for a faster, more coordinated response.

As a Cloud Based platform, STRAX enables multi-agency collaboration and dissemination of real time & critical information with all event participants both on scene and remote. STRAX provides a secure portal for sharing data across departments, agencies, and organizations, delivering comprehensive situational awareness.

STRAX's extensible API enables integration with a multitude of disparate solutions including existing systems and data, safety/tip apps, duress buttons, electronic sensors, and video feeds from public, private, and helicopter/drone cameras.

Combining data and the use of video analytics enables agencies an increased situational awareness and reduced reaction time and workload. STRAX, via cameras and Video Management System (VMS), integrates public & private cameras along with manned/unmanned aircraft video to combine with these other sensors. Providing real-time access to nearby cameras in the network to all users in a single, shared map- based operational view. This fused data enables expedited decision making, quickly providing responders with real-time information and data, increasing first responder safety.

Existing customers use STRAX to gather Maritime and Air Surveillance, Computer Aided Dispatch (CAD) information, Automatic License Plate Reader (ALPR) content, Acoustic Gunshot data to improve event Detection, expedite Verification, and improve Response.

As a Florida based company, SIG has worked with Federal, County and Local agencies who have a Maritime Border Security responsibility. Adoption of the STRAX platform enabled multiple agencies to become domain aware in multiple aspects. Surveillance, Monitoring, Identification, Assessment, Targeting and Intelligence. STRAX enabled enhanced communications and incident management leading to apprehensions/detentions/seizures and removals.

The STRAX Intelligence Group's core products and solutions are in use by customers for and applicable to multiple of the consortium's focus areas including, Surveillance and monitoring, Identification and assessment, Targeting and intelligence, Communications and information management, and Apprehension.

SIG's personnel background includes, Public Safety/Law Enforcement, Military, and commercial technology development and possess extensive experience with Software Development & Engineering, Public Safety & Law Enforcement, Systems Integration, Commercial Security, IoT/M2M Engineering, Solutions Engineering, Wireless Communications, Aviation including Manned and Unmanned, Aircraft Systems, and Military Operations
